

# RIVER BASINS

## INTERNATIONAL CONFERENCE ON MONITORING, MODELLING AND MANAGEMENT OF RIVER BASINS

## ABSTRACTS

Edited by  
Máté Krisztián Kardos, Orsolya Szomolányi, Adrienne Clement,  
Steffen Kittlaus, Karoline Morling and Stephan Fuchs

Budapest, Hungary  
4-5 June 2024

# **RIVER BASINS 2024**

## **INTERNATIONAL CONFERENCE ON MONITORING, MODELLING AND MANAGEMENT OF RIVER BASINS**

Jointly organized by:

Budapest University of Technology and Economics  
Department of Sanitary and Environmental Engineering

Technical University Vienna  
Institute of Water Quality and Resource Management

Karlsruhe Institute of Technology  
Institute for Water and Environment

Environment Agency Austria

Environment Agency Germany

German Federal Institute of Hydrology

Deltares

International Committee for Protection of the Danube River

## **Abstracts of the Conference**

Edited by

Máté Krisztián Kardos, Orsolya Szomolányi, Adrienne Clement,  
Steffen Kittlaus, Karoline Morling and Stephan Fuchs

Budapest, Hungary  
04-05 June 2024

The conference was supported within the framework of the Széchenyi Plan Plus program with the support of the National Laboratory for Water Science and Water Security (RRF 2.3.1 21 2022 00008) project.

Conference program .....	5
Oral presentations .....	6
Pitch presentation of posters.....	8
Abstracts of oral presentations .....	11
Influence of sampling strategies on the assessment of concentrations and loads of trace contaminants in surface waters .....	12
Particle-bound nutrients and trace substances in small streams: Implications for the aquatic environment and presentation of a novel sampling method .....	14
Trace substance monitoring at the intersection of urban drainage and an urban river in Karlsruhe, Germany.....	16
Benchmarking the persistence of organic micropollutants in large European rivers	18
PFAS transport and retention during riverbank filtration and in saturated columns	19
Exploring human-vector dynamics using insect repellent concentrations in the river .....	21
Assessment of diffuse heavy metal loadings by surface water and evaluation of their potential contamination.....	23
Assessment of the share of sediments in the eutrophication of reservoirs: Case study from the Czech Republic .....	25
Transboundary contamination risk assessment and modelling in the Drava River floodplain.....	26
Calculating emissions to water – a simplified method implemented as a spatially and temporally distributed model.....	28
Modelling of nutrient emission in river systems (MONERIS): Presenting new perspectives and current developments of a widely used emission model .....	30
Complex water quality simulations in Želivka River Basin and Švihov Water Reservoir (CZ).....	32
Developing nitrogen boundaries for surface water bodies on national and regional scale for Germany.....	34
The new Urban Wastewater Treatment Directive from the perspective of the receiving rivers .....	36
Nitrogen and phosphorous load reduction approach for catchments to reach the water quality targets set for the Water Framework Directive.....	38

Efficiency of the buffer zones in nutrient load reduction under climate change conditions.....	40
Abstracts of poster presentations .....	42
A harmonized Danube Basin-wide multi-compartment concentration database to support inventories of micropollutant emissions to surface waters .....	43
Mercury pollution in the Lom River Basin (East Cameroon): using PEGASE model to assess small scale gold mining pressures over surface water quality .....	45
Seasonality in agricultural-associated river pollution: a global multi-pollutant modelling approach.....	47
Investment needs in water and wastewater infrastructure and inevitability of horizontal and vertical solidarity in fulfilling SDG 6.....	49
Investigating eutrophication levels in the stream network of the Danube Basin ..	51
Event forecasting of rivers with soft computing methods .....	52
Assessment of erosion phosphorus transport risk: Case study for the Elbe Basin	54
Detecting pollutant sources and pathways: High-frequency automated online monitoring in a small rural French/German transborder catchment.....	55
Modelling of PFAS emissions into the Upper Danube.....	56
Quality management in river basins starts at the micro level - Filtration systems for storm water treatment – Appropriate filter substrates .....	58
Can machine learning tools support biological quality status assessment? .....	61
Application of different types of catchment models to support understanding the hydrological and transport processes, emission patterns, and model limitations related to these in a meso-scale catchment .....	63
Updating input data and expanding the range of substances by a harmonized approach for modelling emissions from Urban Systems and Municipal Wastewater Treatment Plants in MoRE.....	65
Heated rivers: learning from climate change and energy scenarios along a 700 km stretch of the Rhine .....	67
Studying the effects of water temperature, phytoplankton and discharge variations on dissolved oxygen in the German reach of free-flowing Rhine .....	68
Exploring carbon dioxide dynamics and anthropogenic influences in the Ganga River: Implications for riverine management.....	69

Identification of drained areas for enhanced precision in regionalized emission modelling.....70

Estimation of hazardous substance loads in a small catchment based on composite sampling .....72

Lesson learned from the application of a catchment-specific continuous surface water quality monitoring system .....74

Horizontal and vertical mass fluxes between aquifer and river during river floods75

Assessment of pollutant emissions to support river basin management in Albania according to the EU, AMORE-AL.....76

Spatial variability of meander characteristics within a distributive fluvial system experiencing an avulsion .....78

Comparative isotope hydrological characterization of the elements of the water cycle in two continental catchments: Koppány (Hungary) and Ledava (Slovenia) streams79

A model-based case study for wetland restoration effects on the hydrological conditions at a Hungarian lowland catchment.....82

Index of Authors .....84

## **Conference program**

Welcome and opening – *Miklós Patziger, Head of Department, Department of Sanitary and Environmental Engineering, Budapest University of Technology and Economics*

## Oral presentations

### Monitoring (Tuesday, 4th June, 9:10 – 10:40)

*Chair: Adrienne Clement, Budapest University of Technology and Economics, Hungary*

Influence of sampling strategies on the assessment of concentrations and loads of trace contaminants in surface waters. *Ottavia Zoboli – TU Wien, Austria*

Particle-bound nutrients and trace substances in small streams: Implications for the aquatic environment and presentation of a novel sampling method. *Peter Flödl – BOKU Wien, Austria*

Trace substance monitoring at the intersection of urban drainage and an urban river in Karlsruhe, Germany. *Lukas Kopp – Karlsruhe Institute of Technology, Germany*

### Monitoring and modelling I (Tuesday, 4th June, 11:10 – 12:40)

*Chair: Ottavia Zoboli, TU Wien, Austria*

Benchmarking the persistence of organic micropollutants in large European rivers. *Mark Honti – HUN-REN – BME Water Research Group, Hungary*

PFAS transport and retention during riverbank filtration and in saturated columns. *Thomas James Oudega – TU Wien, Austria*

Exploring human-vector dynamics using insect repellent concentrations in the river. *Enpei Li – Federal Institute of Hydrology, Germany*

### Monitoring and modelling II. (Tuesday, 4th June 13:40 – 15:10)

*Chair: Jos van Gils, Deltares*

Assessment of diffuse heavy metal loadings by surface water and evaluation of their potential contamination. *Yassine Mimouni – University of Liège, Belgium*

Assessment of the share of sediments in the eutrophication of reservoirs: Case study from the Czech Republic. *Josef Krása – Czech Technical University in Prague, Czech Republic*

Transboundary contamination risk assessment and modelling in the Drava River floodplain. *Jasminka Alijagić – Geological Survey of Slovenia*

**Modelling (Wednesday, 5th June 8:30 – 10:30)**

*Chair: Stephan Fuchs, Karlsruhe Institute of Technology, Germany*

Calculating emissions to water – a simplified method implemented as a spatially and temporally distributed model. *Jos van Gils – Deltares, The Netherlands*

Modelling of nutrient emission in river systems (MONERIS): Presenting new perspectives and current developments of a widely used emission model. *Anna Oprei – Leibniz Institute of Freshwater Ecology and Inland Fisheries, Berlin, Germany*

Complex water quality simulations in Želivka River Basin and Švihov Water Reservoir (CZ). *Pavel Tacheci – DHI a.s., Prague, Czech Republic*

Developing nitrogen boundaries for surface water bodies on national and regional scale for Germany. *Karoline Morling – Karlsruhe Institute of Technology, Germany*

**Modelling and Management (Wednesday, 5th June 11:00 – 12:30)**

*Chair: tbc.*

The new Urban Wastewater Treatment Directive from the perspective of the receiving rivers. *Máté Krisztián Kardos – Budapest University of Technology and Economics, Hungary*

Nitrogen and phosphorous load reduction approach for catchments to reach the water quality targets set for the Water Framework Directive. *Peter Schipper – Wageningen University & Research, The Netherlands*

Efficiency of the buffer zones in nutrient load reduction under climate change conditions. *Damian Bojanowski – AGH University of Krakow, Poland*

## Pitch presentation of posters

### Session I. (Tuesday, 4<sup>th</sup> June 15:20 – 15:45)

*Moderator: Martine Broer, Environment Agency Austria*

A harmonized Danube Basin-wide multi-compartment concentration database to support inventories of micropollutant emissions to surface waters. *Steffen Kittlaus – TU Wien, Austria*

Mercury pollution in the Lom River Basin (East Cameroon): using PEGASE model to assess small scale gold mining pressures over surface water quality. *Marie Sorella Bella Atangana – University of Liège, Belgium/University of Yaoundé, Cameroon*

Seasonality in agricultural-associated river pollution: a global multi-pollutant modelling. *Mirjam Bak – Wageningen University, Netherlands*

Investment needs in water and wastewater infrastructure and inevitability of horizontal and vertical solidarity in fulfilling SDG 6. *Károly Kovács – BDL Ltd., Hungary*

Investigating eutrophication levels in the stream network of the Danube Basin. *Eszter D. Nagy – Budapest University of Technology and Economics, Hungary*

Event forecasting of rivers with soft computing methods. *Tamás Koncsos – Budapest University of Technology and Economics, Hungary*

Assessment of erosion phosphorus transport risk: Case study for the Elbe Basin. *Barbora Jachymová – Czech Technical University in Prague, Czech Republic*

Detecting pollutant sources and pathways: High-frequency automated online monitoring in a small rural French/German transborder catchment. *Angelika Meyer – Saarland University, Germany*

Modelling of PFAS emissions into the Upper Danube. *Meiqi Liu – TU Wien, Austria*

Quality management in river basins starts at the micro level: Filtration systems for storm water treatment – Appropriate filter substrates. *Claus Huve – Hauraton Ltd., Germany*

Can machine learning tools support biological quality status assessment? *Orsolya Szomolányi – Budapest University of Technology and Economics, Hungary*

**Session II. (Tuesday, 4<sup>th</sup> June 16:30 – 17:00)**

*Moderator: Steffen Kittlaus, TU Wien, Austria*

Application of different types of catchment models to support understanding the hydrological and transport processes, emission patterns and model limitations related to these in a meso-scale catchment. *Zsolt Jolánkai – Budapest University of Technology and Economics, Hungary*

Updating input data and expanding the range of substances by a harmonized approach for modelling emissions from Urban Systems and Municipal Wastewater Treatment Plants in MoRE. *Julia Nowak – Karlsruhe Institute of Technology, Germany*

Heated rivers: learning from climate change and energy scenarios along a 700 km stretch of the Rhine. *Tanja Bergfeld-Wiedemann – Federal Institute of Hydrology, Germany*

Studying the effects of water temperature, phytoplankton and discharge variations on dissolved oxygen in the German reach of free-flowing Rhine. *Manoj Sanyasee Thapa – Federal Institute of Hydrology, Germany*

Exploring carbon dioxide dynamics and anthropogenic influences in the Ganga River: Implications for riverine management. *Pooja Upadhyay – Indian Institute of Technology Roorkee, India*

Identification of drained areas for enhanced precision in regionalized emission modelling. *Michelle Wild – Karlsruhe Institute of Technology, Germany*

Estimation of hazardous substance loads in a small catchment based on composite sampling. *Tímea Lajkó – Budapest University of Technology and Economics, Hungary*

Lesson learned from the application of a catchment-specific continuous surface water quality monitoring system. *Zsófia Kovács – University of Pannonia, Hungary*

Horizontal and vertical mass fluxes between aquifer and river during river floods. *Gadadhara Ferraz de Figueiredo – Budapest University of Technology and Economics, Hungary*

Assessment of pollutant emissions to support river basin management in Albania according to the EU, AMORE-AL. *Xhuljo Sema – Agricultural University of Tirana, Albania*

Spatial variability of meander characteristics within a distributive fluvial system experiencing an avulsion. *Neve Norris – University of Glasgow, United Kingdom*

Comparative isotope hydrological characterization of the elements of the water cycle in two continental catchments: Koppány (Hungary) and Ledava (Slovenia) streams. *István Gábor Hatvani – HUN-REN Research Centre for Astronomy and Earth Sciences, Hungary*

A model-based case study for wetland restoration effects on the hydrological conditions at a Hungarian lowland catchment. *Zsolt Kozma – Budapest University of Technology and Economics, Hungary*

## **Abstracts of poster presentations**

## Modelling of PFAS emissions into the Upper Danube

Meiqi Liu<sup>1</sup>, Steffen Kittlaus<sup>1</sup>, Erwin Meijers<sup>2</sup>, Corine ten Velden<sup>2</sup>, Jos van Gils<sup>2</sup>, Matthias Zessner<sup>1</sup>

The PROMISCES Project is funded by the European Union under the Horizon 2020 Framework Programme to support Europe's Green Deal. PROMISCES runs from November 2021 to April 2025 and aims to investigate different recycling routes, identify (potential) obstacles caused by industrial chemicals and develop solutions. The Danube Case (Case Study #2) is one of 7 case studies within this project. The research addresses the quantification of sources and pathways of PFAS pollution in the basin and of their behavior during bank filtration using the example of the Upper Danube catchment area down to Budapest. The overall work is structured as follows:

- Monitoring of PFAS occurrences and concentrations in input pathways, in tributaries of the Danube, the Danube itself and in bank filtrate influenced by the Danube.
- Modelling of PFAS inputs in the Danube catchment upstream of Budapest using the emission model MoRE.
- Modelling the behavior of PFAS during bank filtration near Vienna and in Budapest, with the aim of being able to depict scenarios for future developments.

While results from the monitoring investigations are presented separately (Liu et al. 2024), this contribution will make use of these results to implement the MoRE emission model (Fuchs et al., 2017) for PFAS in the upper Danube Basin. While Kittlaus et al. (2022) already demonstrated the capability of the MoRE model to assess PFOA- and PFOS-emissions with sufficient accuracy at the national scale of Austria, our research enhances the model in scale (upper Danube Basin) and in the parameters considered (including PFBA, PFPeA, PFHxA, PFHpA, PFOA, PFBS, PFHxS, PFOS, GenX and ADONA) as well as in the considered emission sources. In the light of the importance of PFAS hotspots, in addition to usual MoRE-pathways we updated the model towards estimation of emissions from airports and municipal landfills entering surface waters via the groundwater. In the presentation we are going to show the modelling approach, valuation results, a regionalized pathway analyses to identify most relevant emission pathways and a

risk analyses to identify rivers with expected high pollution levels of PFAS. Further investigations will aim to use MoRE as a tool for scenario evaluation, providing input into a bank filtration model to relate changes in the catchment to drinking water quality of water supplied using bank filtration from the River Danube.
